

PESTICIDE APPLICATION: In an effort to keep our campus safe, pesticides may be applied to areas where children play. We never spray when children are in school. The term pesticide includes insecticides, herbicides, rodenticides, and fungicides. Typically, we use the same pesticides as used at home, weed killer for weeds and an herbicide on the grass to control the dandelions in the spring.

If you have questions or concerns about our pesticide use, please contact the school office.
